Feb. 12 choose the API we will use for the project. We decides to use a currency exchange API at exchangerate.host. Begin to test if the API can work properly.

https://github.com/ysun822/currencychecker/commit/ca786a343bdf63e7761214ffddb57e4cde35ebed

Feb. 13 finish the wrap function for time series data. Finish a function to return the dataframe of the exchange rate in a time period for a certain currency, and another function to draw a plot for the currency change of 2 currency in a certain time period.

https://github.com/ysun822/currencychecker/commit/37aa21aa297146c40e610fcc2c785cf4de384ae4

Feb. 14 add unit test for the two functions. Begin to write documentation for the function.

Feb. 15 separate the test files and R files into different folders. Finish the documentation for the functions.

https://github.com/ysun822/currencychecker/commit/4905274ffc842030308202ff3bd217b4a6f51403

Feb. 16 add travis to the project. Report error when building the travis. Need to figure the problems out. Finish the lincense. Finish the vignette part for my functions.

https://github.com/ysun822/currencychecker/commit/ab4d5e42cc1df64f051771cb875ef54061bd48c2

Feb. 17 cannot figure out the problem of travis, so change my mind to use Github Action for CI. Setting up the Github Action for CI. Add code of conduct. There is a lot of commit to debug the CI testing, I just selected one commit in the file. You can find more commit in the evening of Feb. 17 for the debugging process.
